

SPECIAL FUNCTIONS

SPOT
The massage heads can massage a particular spot.

KNEADING
Skin and muscles are either clasped and kneaded between the thumb and the index finger or with both hands. This massage technique is used in particular to ease tension.

TAPPING
Short, tapping movements are performed with the edge of the hand, the palm or the fist. This promotes blood circulation in the skin and softens tense muscles. If tapping is performed at lung height, this can improve the release of mucus in the lung.

SHIATSU
Shiatsu (finger press) is a form of body therapy originating in Japan. The massage technique consists of soft, rhythmic, far-reaching stretches and rotations. The aim of Shiatsu is to stimulate individual parts of the body and to mobilise the muscles.

AIR COMPRESSION
Rising and receding airbags have a pumping motion which produces natural muscle reflexes. This is particularly beneficial in the calf and foot area.

KNEAD & TAP (DUAL ACTION)
The techniques of kneading and tapping are combined in order to relieve tension and stimulate blood circulation at the same time.

AUTOMATIC
Specifically developed automatic programmes for the whole body, which offer a big range of different massage techniques. Additionally you can also turn on the heating function, if you'd like.

BACK AREA
An individual applicable to any size massage area.

CARBON HEATING
Deeply penetrating Carbon infrared heat, blood vessels expand, the blood flow increases and the muscle tone is reduced. In addition, it carries out a highly beneficial effect on nerve cells, which are responsible for reporting pain to the brain.

SOLE ROLLER
The foot massage stimulates the nerve endings and certain organs of the body, which also relaxes the muscles.

AIR AREA
Whole body airbag massage. Different areas are individually selectable.

BLUETOOTH
A wireless connection to your smartphone or tablet ensures a facilitated music experience.

ZERO GRAVITY
You put yourself in the position of an astronaut – that "weightless feeling".

ROLLING
Pleasant alternation between relaxation and releasing the muscles – also perfectly suited for a final massage, for relaxation and recovery of the muscles.

KNEAD & FLUTTER
A massage combination of kneading and fluttering.

FLATTERS
Light tapping with the palm of the hand promotes blood circulation in the muscles and tightens the connective tissue, while at the same time reducing tension.

L-SHAPE
A deeply penetrating full-body massage from the neck down to the buttocks.

S-LINE
In this automatic programme, massage heads that are particularly close to the body massage the entire back right up to the buttocks. The S-shaped mechanism is modelled on the natural anatomy of the spine.

ZERO SPACE
For the lying-position the massage chair moves forward and therefore requires very little distance to the wall behind. Space saving and comfortable!

2D MASSAGE
The 2D massage mechanism allows the massage chair to measure your back and is also able to recognise the exact position of the sections of your spine.

ADJUSTABLE FOOTREST
The footrest can be extended, this way it is adaptable to different body sizes.

RECLINING POSITION
The adjustability of the backrest and footrest contributes to personal well-being of the body position.

BRAINTRONICS®
Braintronics® technology synchronises your brainwaves through audio stimulation. Combined with a specially developed massage programme your stress-ridden body will be able to relax. No matter whether you'd like to relax, dream or learn – anything's possible.

ADJUST SHOULDER
The massage heads can be moved upward or downward to a suitable position in the shoulder area.

AIR INTENSITY
Adjustable airbag massage intensity.

3D MASSAGE
With this latest technology, the massage robot not only moves up and down the back, but also into and out of the muscles.

SHOULDER GRASP
Targeted kneading massage in the shoulder/neck area – ideal for easing tension and pain in this area.

SPEED
Massage speed is adjustable.

WIDTH
The distance between the both massage heads can be set (narrow, medium and wide).

MUSIC
Further relaxation and fun with the music function.

REFLEXOLOGY
Reflexology regenerates foot muscles and has a harmonizing effect on almost all organs inside your body.

HUMAN HANDS FEELING
Specially designed massage heads imitate the hand motion of a professional masseur. The maximum stretch space is 6,5 cm, and the maximum stretch angle is 41 degrees, so the mechanical hands can do effective massage to human cervical vertebra thoracic vertebra and lumbar vertebra.

QUICKSTART
With one touch the quick start buttons in your armrest allow you to control the most important functions.

DUAL SENSOR BODY SCAN
The massage chair performs a body scan to capture the main areas of the neck and back to ensure optimal pressure throughout the massage. The scan technology detects the height of your shoulders, that can be modified after the scan, if required.

Product Specifications

Model:	BetaSonic III
Gross Weight:	95KG
Net Weight:	80KG
Voltage:	220-240 V ~ 50/60 Hz
Rated output:	220 W
Air Pressure:	0.022-0.03MPa
Noise:	≤60dB
Safety design:	Class I
Running time:	20 Minuten
Certificates:	CE ENEC X
braintronics®:	21 Minuten

Dimensions:	
Upright:	116 x 76 x 156 cm
Reclining:	76 x 95 x 185 cm

BETASONIC III

BetaSonic III – Relaxation at the Highest Level

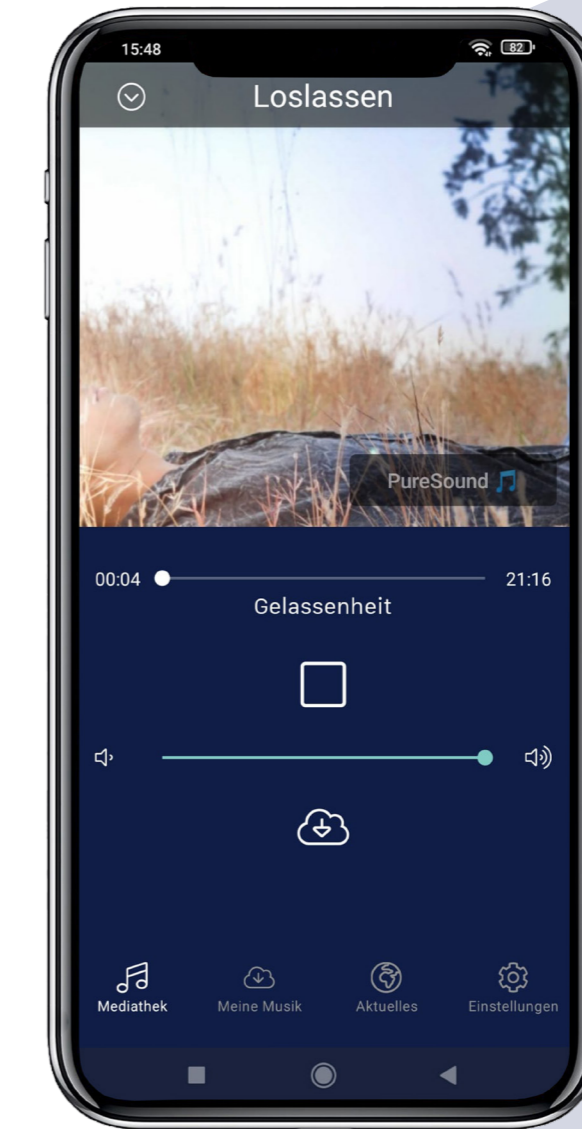

The BetaSonic III combines state-of-the-art massage technology with deep regeneration. Thanks to the individually adjustable backrest, the massage perfectly adapts to any body size. The deep-penetrating carbon infrared heat expands blood vessels, promotes circulation, and relieves tension and pain.

A foot massage with integrated rollers stimulates nerve endings and organs, relaxes the muscles, and boosts overall well-being. Additionally, a gentle, individually controllable airbag massage provides relief for the entire body.

For a fully pleasant experience, the BetaSonic III offers Bluetooth functionality for wireless music streaming.

The innovative weightlessness position, inspired by space travel, optimally distributes body weight and relieves joints and muscles. Targeted Shiatsu massages release tension, while kneading and tapping movements stimulate circulation.

Various automatic programs and an optional heat function make the BetaSonic III the perfect choice for relaxation and regeneration – anytime, at the push of a button.

The human brain is a complex organ made up of countless nerve cells, also known as neurons, which constantly produce tiny electrical impulses. Every thought, every sound, and every impression is transmitted through these small electrical impulses; it is, so to speak, the language of the brain. The sum of these impulses, when graphically represented, forms a waveform. These waves are referred to as brainwaves.

With the combination of braintronics® audio stimulation, guided meditation, and soothing massage, various states of relaxation in the brain can be achieved through the stimulation of brainwaves. Whether you want to improve your concentration sustainably, relax, or indulge yourself – everything is possible with a massage chair from the Casada family.
